

USER MANUAL

SubtitleDownloader

1. Application description:

This software allows you to search and download movies subtitles from a specific site list.

2. Functions:

- Search subtitles by movie title or IMDB id
- Auto subtitles search for movies without subtitles with the same name as movie file
- Batch search for movies subtitles within a parent folder
- Download subtitles in a specific location or auto download in movie file folder
- Automatically download , unpack and rename subtitles files according to movie file name
- Smart selection of the best match subtitles for movie files according to movie file version, movie file name and IMDB id from a nfo existing.

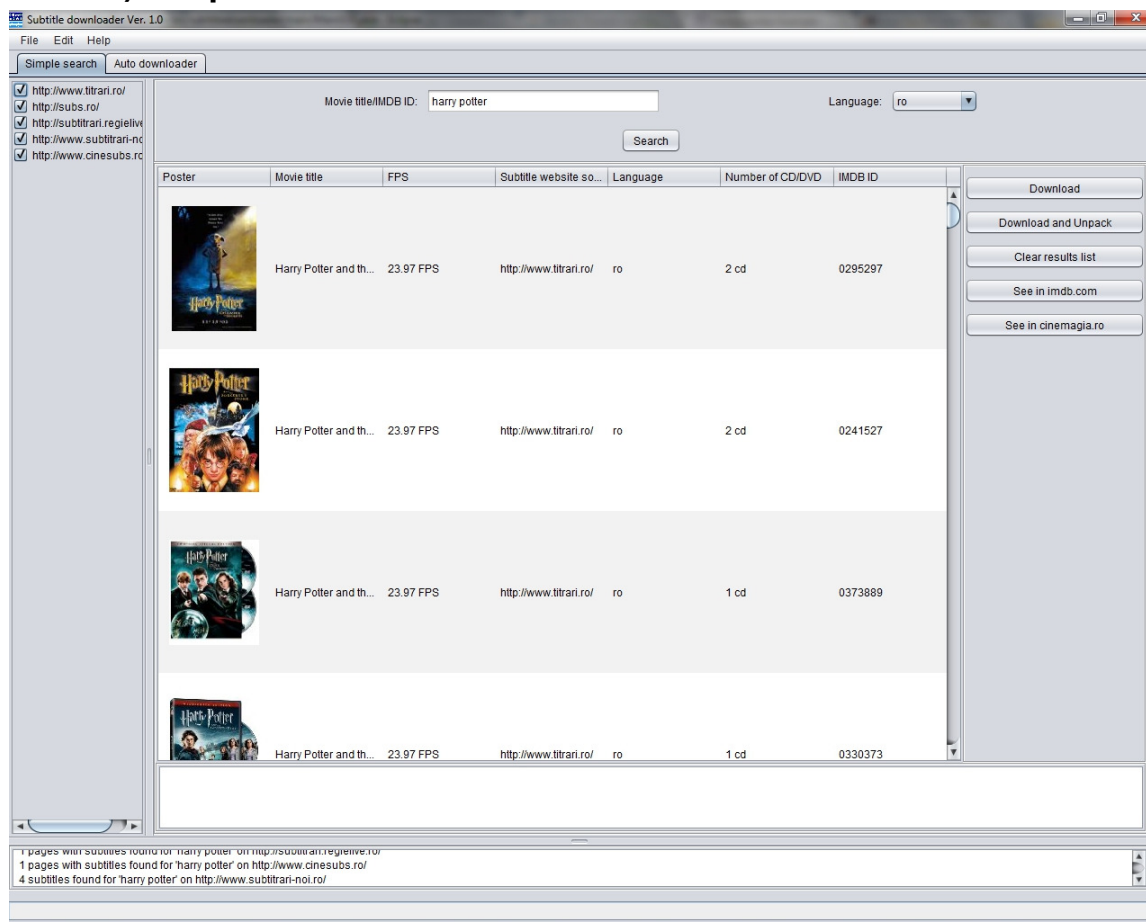

3. Technical requirements:

This application is in JAVA language and you need a JRE installed in the system. You can download at least version 1.6 from <http://java.com/en/download/manual.jsp>.

You need also Internet connection and an operating system that can use java(Windows, Linux).

4. Application usage:

a) Simple search:

This type of search allows user to search subtitle by movie title or by IMDB ID.

Steps to follow:

- Select from the left side of the screen the sites you wish to search for subtitles
- Write in "Movie title/IMDB ID" field what you wish to search for.
- Select subtitle language.
- Press "Search" button.

In this moment you have to wait for search operation to finish. This fact is showed by the enabled right buttons. In the bottom of the page we can see the results log of the search operation.

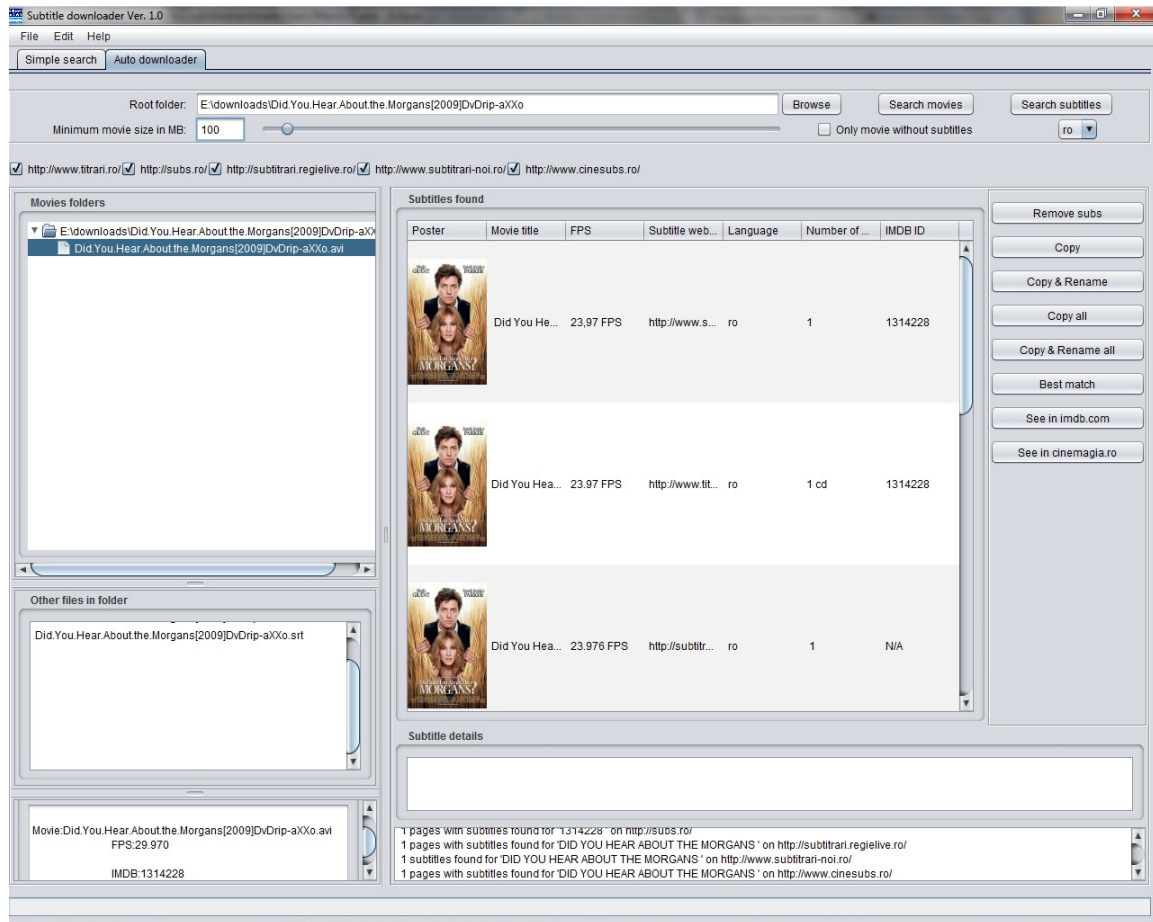

Left click to a table result allows you to see a description of the subtitle version in the center bottom of the page.

To download a subtitle you have to press “Download” or “Download and unpack” button after you select the subtitle/s from result table. Unpack works only with zip and rar archive.

You can empty the search results by pressing “Clear results list” button.

You can see movie details from imdb.com or cinemagia.ro by pressing the corresponding button in the right side panel.

b) Auto downloader

This type of search allows user to automatically search and download many subtitles in the same time.

Steps to follow:

- Select parent folder that contains many video files and folder.
- Set minimum video file length to search for.
- Select if you want to search only for movies without subtitles with the same name as video files, or all movie files.
- Press "Search movies" button to search for video files. This will fill the left side panel with all video files found.
- Select sites to search for subtitles.
- Press "Search subtitles" to start searching for subtitles of the selected video files in the left panel. To see what subtitles was found for every video file, you have to click the video file and in the right side you will see all subtitles found for the selected video file. In the same time you can see information like framerate and imdb id if this information exists in a nfo file in the same folder as video file. You can also see the content of a text file in the left panel.

- When you click on a subtitle in the results table, we can see information about movie file version of the selected subtitle, information that will be in “Subtitle details” panel.
- For every video file in the left panel, in the “Subtitles found” table you can see a list with all subtitles found for that video file. Also we can remove a subtitle from list by pressing the “Remove subs” button.
- Copying (Download and copy subtitle file in video file location) is done by pressing the “Copy” button.
- ”Copy and rename” button, downloads and copies selected subtitle, in the video file folder and change the name of the subtitle file with the same name of the video file.
- ”Copy all” copies all subtitles for every video file in their folders.
